ids Introduces AnyWhere™ Provisional Implant Abutment System

Englewood Cliffs, NJ –(June 2, 2014) Today, ids (Integrated Dental Systems) announced the introduction of its AnyWhere™ Provisional Implant Abutment System.

“AnyWhere is an easy and inexpensive way for patients to have a beautiful provisional immediately following implant placement” stated ids President and CEO, Carey Lyons. Dentists can now provide matching tooth forms chair-side while virtually eliminating undesirable spaces and gaps. AnyWhere fits all the most popular implant systems with a screw-retained abutment that does away with cemented provisionals. This truly revolutionary system provides 8 tooth forms and 4 shades, so there’s no need for the preordering of a specific brand abutment, time consuming impressions and the fabrication of a temporary restoration.

About ids

Founded in 2013, ids provides a full suite of tooth replacement products that offer dentists and their patients more options and better implant outcomes through innovative, patented, premium product designs. For more information, visit www.idsmegagen.com.
